

# Use Case: Binding Moratorium

## What is a Binding Moratorium?

A Binding Moratorium function is required to prevent issuing/binding business in certain locations, usually due to (but not limited to) weather/environmental events.

## Rest Assured with INSTANDA

With INSTANDA's pre-built APIs, insurers can make updates 'on the fly' and publish moratorium changes with ease. Any in-flight quotes will automatically be impacted by the moratorium update.

This process allows for a moratorium based on any geographical information from street to state.

Don't let storms scare you. Make changes in minutes and protect your company.
