

Our Favorite Platform Changes

Over the past year, INSTANDA has been hard at work ensuring our platform remains innovative, flexible, and agile in today's consumer world. Here is a look at some of our favorite changes to the platform:

1

Policy Data pulled from SFTP

Eliminate keystrokes via third-party, SFTP folders pulling policy data, such as affinity groups automatically pulling new policies into the INSTANDA platform.

2

Microsoft Azure Consumption Commit

INSTANDA's presence in the Microsoft Azure marketplace means clients with a MACC can use this to purchase INSTANDA services.

3

Multi-Item Bulk Uploads

We know that our clients are busy, so we are always finding ways to reduce the time it takes to quote, rate, and issue new products. The multi-item bulk uploads allows users to import a schedule of risks via an Excel spreadsheet.

4

API Functionality

Our flexible platform allows API callouts to fit the needs of any use case and tailor the platform to each client's specific needs, including: allowing clients to rate, amend/re-rate and then bind a single quote, all via API.

5

New Configuration User Interface

INSTANDA strives to make configuring products easy and efficient., Thus, we rolled out a new behind-the-scenes UI to further simplify the configuration process.

Coming Soon!

Life & Health: Enriched group scheme capability allowing for the creation of group packages and benefits with bulk member upload capability. Stay tuned for more information!

Client User Community: Clients have the opportunity to join our user group to learn from one another in an online forum.
